Cobelty : innovation with intelligence, clever with strategy

I'm very happy to share Cobelty's creation.

Cobelty supports developers of digital technologies for whom standardization and open source development are major issues of transfer, influence and leadership, particularly when it comes to intellectual property.

Whether you're exploring a technological avenue or preparing a future product, Cobelty can support you across a broad spectrum of timeframes, as well as across a wide and coherent range of critical digital technologies: xG connectivity, cybersecurity, quantum, AI and sensing. Cobelty is also an expert in multiple dimensions of system and infrastructure complexity.

When launched, Cobelty's first line of business is dedicated to strategic intelligence on technological developments that are or could be the subject of standards, open source use, publication and distribution, and all the intellectual property issues involved.

Two other business lines will rapidly complete the deployment of the Cobelty offering beyond "Cobelty Strategic Intelligence":

- training, with the Cobelty Academy business line, which targets a major issue: skills.

The Cobelty Academy offering is being developed through several key partnerships to be announced by the end of 2025

- research and innovation with the Cobelty Labs business line, which targets another major challenge: that of technological development and effective contribution to standardization and open source communities. Cobelty Labs aims to contribute to the creation of very high-value intellectual property portfolios, and includes the exploitation component.

The Cobelty Labs offer is based on multiple strategic partnerships which will be announced at the beginning of 2026.

The deployment and development of Cobelty are associated with an investment strategy. For further details, please contact invest@cobelty.com.

Cobelty's ambition is to be an ecosystem developer. Cobelty enlightens, enables, empowers, facilitates and is resolutely open to all forms of collaboration.
